EMERGENCY SYSTEMS

**BUILDING SMARTER
EMERGENCY COMMUNICATIONS**

Parking structures and facilities are essential components of almost all new developments these days. And yet, when it comes to personal safety, these locations can be separated or remote from main structures. This means that contacting emergency assistance can take precious extra time when minutes matter most.

With CASE Emergency Systems, you can ensure help is always close by and available at the touch of a button, any time someone needs it.

CASE Emergency Blue Light Towers, E-Phones, and Lexan Call Boxes are ideal for a number of parking lot and garage needs:

- » Parking lot events including falls, heart attacks, and public safety concerns
- » Security alerts like stolen vehicles or trespassers
- » One-touch request for assistance or escort to vehicle
- » Valet communications relay between distant locations
- » Public address system for announcements or warnings

How CASE Works

No matter which of our products you choose for your location, all CASE equipment offers the same functionality and benefits.

No Digging Trenches. No Complicated Installations.

CASE units are available 100% wireless with solar power panels, a 10-day back-up battery, and choice of 4G cellular or satellite phone connectivity. Hard-wired options are also available, but are not a requirement to install CASE equipment.

CASE equipment also gives you the flexibility to install a wall-mounted unit inside garages and multi-level structures, or our CASE Blue Light tower for parking lots and other open facilities.

Customized Connections.

You choose where users are routed when a CASE unit is activated. Units can dial 911, or can route to your front desk, parking attendant, main security office, or anywhere else.

Durable in All Kinds of Weather

Stainless-steel housings and components are made to be weather and tamper resistant in rain, snow, heat, wind, and more.

High-Visibility

CASE units are easy for people to find thanks to a bright blue strobe, and a broad range of bold exterior colors. You can even choose to install additional strobes as necessary.

Additional Accessibility Options

To make sure your CASE units serve as many people as possible, you can add a TTY keypad and display and/or a faceplate camera to any product.

Public Address Capabilities

Adding an optional 4-way speaker allows you to activate any and all CASE units at your location to make announcements, warnings, or provide directions.

Self-Monitoring Maintenance

No need to engage maintenance teams in checking on CASE units - with the optional CASEAlert program, units perform scheduled self-checks and send reports to your central command team.

Upgrade Existing Call Boxes

If you're working with a legacy emergency calling system, it may be time to replace old lines or components. You may also simply want the added convenience and peace of mind that comes with solar power, a battery backup, and wireless connectivity. Our retrofit kits are designed to add any or all of these options to an existing call box, and are compatible with multiple different brands.
